

Gary Rosenberg is Professor of Neurology, Neurosciences, Cell Biology and Physiology at the University of New Mexico Health Sciences Center. He studied medicine at the Albert Einstein College of Medicine where he also did a neurology residency. He worked with Drs. Robert Katzman and Robert Terry. Currently, he is Chairman of Neurology at the University of New Mexico, and his research on the role of neuroinflammation in dementia is supported by NIH RO1 grants to study biomarkers in vascular cognitive impairment and to test drugs to treat vascular dementia in animal models.
