

Sara Bristow serves as a Product Manager at Recombine. She acts as coordinator and liaison for FertilityMap, a research study investigating the genetic factors influencing infertility. Prior to joining Recombine, Sara completed her Ph.D. in genetics and genomics at Duke University. She focused on studying global transcriptional dynamics during the cell cycle in several organisms, including humans. Preceding her Ph.D. training, Sara received a B.S. in biology at Georgetown University, where she focused her efforts on better understanding effective teaching methods in a science classroom. She continues to be passionate about science education and relaying current research to the public.
