Foreword

This is the 4th book of proceedings of Controversies in Obstetrics, Gynecology and Infertility, which summarizes the 4th World Congress in Berlin. This book like the congress is solely devoted to controversial issues in the field and represents a unique source of cutting edge knowledge for the general practitioner as well as for the expert.

Over the years the field of Obstetrics and gynecology had witnessed an enormous expansion in clinical and basic data as well as tremendous growth in field-related technology. This growth has also created a greater need to debate the many controversial issues that have subsequently arisen.

As evident from the content of the book the controversies presented encompass the main unresolved issues of our profession. The various chapters presented here consolidate the knowledge through evidence-based medicine but also indicate the gaps and lack of evidence to support certain clinical practices.

We believe that readers will find the chapters stimulating as a source for updating their knowledge and helpful for practical handling of their patients.
